

PEST CONTROL PROGRAM TRAINING A SECRET WEAPON FOR THE AUDIT

Pest management programs at processing plants is regarded as an important practice to ensure food safety. Due to this, auditors across the board, during their assessment of food and beverage processing plants, will examine the plant for evidence of a formal, written pest management program, preventative and control treatments and proper documentation of the program.

MiChem Dynamics offers a training program which shall assist the pest control service provider to be audit ready at any time.

THE WORKSHOP WILL RUN OVER A PERIOD OF 1 DAY

COURSE CONTENT:

1. Control of Pest Management Documentation - Standardizing pest management program records
2. Importance of a risk assessment- How to examine / evaluate the plant for evidence of compliance to the documented pest management program
3. Communication - Standardizing communication formats and contact procedures between pest management companies and food plants
4. Common documentation mistakes
5. Audit preparation - How to prepare for your audits (To-Do's)

This training shall ensure that facilities ensure better scores with each passing audit.

WHO SHOULD ATTEND THIS COURSE:

- Pest Control Officers
- Area / Site Managers
- Anyone directly or indirectly involved with the auditing of the Pest Control Program
